About me

Currently, I work as a financial analyst in a joint venture, with over 9 years of experience in the financial sector. In recent years, I developed a strong interest in programming and decided to transition into the IT field. Recently, I successfully completed the "Aitilogy" course, where I acquired the necessary skills and knowledge in front-end development. During my studies, I developed several real interactive projects using JavaScript, TypeScript, and AngularJS. I am now actively seeking employment to apply my obtained knowledge and realize my potential in this new field.
